Avant-propos

Le programme *Découvrir le sens du nombre* contient des éléments nécessaires à l'enseignement du sens du nombre ainsi que des quatre opérations de base en mathématiques, soit l'addition et la soustraction, la multiplication et la division. Toutes les activités et leur raisonnement doivent se rattacher au vécu quotidien des adultes en apprentissage.

Ce programme est présenté comme suit :

Partie A	<i>Guide pratique à l'intention des enseignantes</i>	
	Chiffres et nombres (Module 1 : bleu)	Une réflexion... Des activités suggérées
	Addition et soustraction (Module 2 : jaune)	Une réflexion... Des activités suggérées Annexes 1-4
	Multiplication et division (Module 3 : rouge)	Une réflexion... Des activités suggérées Annexe 1
	Fiches d'activités laminées	Modules 1, 2 et 3

De façon brève et générale, le *Guide pratique à l'intention des enseignantes* offre des pistes et des stratégies d'enseignement des mathématiques de base aux adultes. Ces stratégies leur permettront de découvrir le sens des nombres en jouant et en s'amusant, tout en développant plus d'habiletés. La **Partie A** met en pratique cette nouvelle réflexion en mathématiques. Le guide, ainsi que les réflexions, les activités suggérées et les fiches d'activités laminées, se veulent une intégration naturelle des mathématiques dans le processus d'apprentissage.

Partie B	Chiffres et nombres (Module 1)	Cahier d'exercices I
	Addition et soustraction (Module 2)	Cahier d'exercices I
	Multiplication et division (Module 3)	Cahier d'exercices II

La **Partie B** présente des feuilles d'exercices que les adultes en apprentissage peuvent faire avec leur enseignante, selon les besoins individuels des adultes.

Comment comprendre et faire les mathématiques?

- Présenter, de façon explicite, des activités pratiques liées au vécu des adultes et des exercices de résolution de problèmes authentiques. (Voir *Fiches d'activités*.)
- Entrecouper les activités par des exercices de calculs arithmétiques qui permettent d'ancrer les faits mathématiques. (Voir *Cahier d'exercices I* et *Cahier d'exercices II*.)
- Estimer des réponses aux calculs.
- Exercer le calcul mental pour pratiquer la rapidité et développer des stratégies.
- Vérifier le calcul estimé ou mental.
- Utiliser la calculatrice.
- Jouer, jouer et jouer pour apprendre et, ah oui, ne pas oublier de s'amuser!

Vite! À vos calculs!

Notes personnelles

De façon brève et générale, le *Guide pratique à l'intention des enseignantes* offre des pistes et des stratégies d'enseignement des mathématiques de base aux adultes. Ces stratégies leur permettront de découvrir le sens des nombres en jouant et en s'amusant, tout en développant plus d'habiletés. La **Partie A** met en pratique cette nouvelle réflexion en mathématiques. Le guide, ainsi que les réflexions, les activités suggérées et les fiches d'activités laminées, se veulent une intégration naturelle des mathématiques dans le processus d'apprentissage.

La **Partie B** présente des feuilles d'exercices que les adultes en apprentissage peuvent faire avec leur enseignante, selon les besoins individuels des adultes.
